

Incident Report

Alert Title: Windows Service Installation Detected

Alert Time: 24 hours and Last 7 days

Priority: Medium

Rule ID: 92058

Rule Level: 12

Verdict: False Positive

Summary

Wazuh generated an alert after detecting the **creation or modification** of a Windows service. Windows services are background processes that run with **elevated privileges** and are commonly used by the operating system and legitimate software. They are also frequently **abused by attackers** to establish persistence or execute malicious code with **SYSTEM-level privileges**.

During analysis, the service details, executable path, parent process, and associated user account were reviewed. The observed activity was consistent with a legitimate software installation or normal operating system behavior followed by this **"ParentImage: C:\Windows\System32\svchost.exe."** No evidence of unauthorized service creation, suspicious executable paths, or malicious persistence techniques was identified. Therefore, the alert has been classified as a false positive requiring no immediate remediation.

Entities Involved

Agent Name: Win-11_Lenovo

Target IP: 192.168.18.24

Rule Description: Windows Service Installation Detected

Alert Timestamp: Jul 2, 2026 @ 19:48:13.962

Action Items

Verify that the service belongs to **trusted software** or the Windows operating system. Confirm that the executable resides in a **legitimate directory** such as C:\Windows or C:\Program Files and is digitally signed by a trusted vendor. Review the parent process and installation timeline to ensure the service was created during an authorized software installation or system update. If the service is verified as legitimate, document the event and consider tuning the Wazuh rule to reduce future false-positive alerts. If any anomalies are identified, perform malware analysis, isolate the endpoint if necessary, and investigate for persistence mechanisms.
